# Next Step, How to Place an Order

If the time is right to invest in a modern low cost pharmacy cross ? call 01 8623852 to order

## FAQ's

1. Identify the ideal fixing position for your pharmacy cross to be located. Supply us with a photo or we can review the height position on google maps to confirm whether height equipment will be needed to access this point safely. (Costs vary nationwide, approximate costs: Scaffold €200, Scissor Hoist €380).
2. We would recommend seeking permission from your landlord or consult with any tenants who may be impacted by the bright flashing lights.
3. Do you need planning permission? - Technically yes, do our pharmacy customers apply for planning permission - not always. We recommend consulting with the relevant local authority for confirmation of the planning requirements in your area.
4. Decide on the model you feel would best serve your pharmacy's needs and we will respond with a quote including delivery or installation. We offer a nationwide delivery & installation service.
5. In advance of our fitting date you should arrange for a certified electrician to prepare a power source at the proposed location. A power source may be in place already. Once a power source is supplied we will connect when installing. It's very common for us to speak with your electrician to agree the finer details of the installation.  
Tip: We recommend placing the on/off switch on a timer, positioned with easy access e.g. by the shop lights, to control the cross as day light hours change through the year
6. Pay 50% deposit by bank transfer and we will arrange an installation in the following 10 working days, we also offer free training and set up for the animated crosses. Balance is paid when order is complete
